## Fibonacci Series

0th	1st	2	3	4	5	6	7	8
0	1	1	2	3	5	8	13	21

$$\text{fib}(n) = \text{fib}(n-1) + \text{fib}(n-2);$$

Visualizing → Recursion Tree

Overlapping  
Sub Problems

Solution we offer  $\rightarrow$  store them

\* if already stored then don't recalculate and pick from storage.

for storage take an array.

At each array element,  $\text{fib}[\text{index}]$  is stored.

- 1  $\rightarrow$  Create array of size  $[n+1]$
- 2  $\rightarrow$  Store the answers once calculated
- 3  $\rightarrow$  If answer exists then pick from array  
do not recalculate

# Memoization

# TABULATION

Bottom  $\rightarrow$  Up Approach

## **How to solve any question on DP in 3 steps.**

- 1. Create the Recursive Solution**
- 2. Memoize It**
  - a. Create a storage array whose dimensions depend on the question & pass it.**
  - b. Store the results in array.**
  - c. Check if the function call has already been made and its value is stored in our storage array.**
- 3. Tabulate It**
  - a. See the memoized solution and tabulate accordingly from bottom to up.**
